1 Introduction

1.1 Software Overview

Travelly is a group trip management application designed to simplify collaborative travel planning, coordination, and shared expense handling. It provides a centralized platform where users can create trip groups, add participants, record and split expenses, track balances, settle payments, and store trip-related photos and documents. The application aims to reduce confusion during group travel by combining planning, financial transparency, and trip data management in one place. It also supports route optimization for selected destinations, helping users plan travel more efficiently. It reduces the need to switch between multiple apps for planning, communication, and trip record-keeping.

1.2 Project Scope

The Travelly platform focuses on improving the overall group travel experience by providing:

- **Trip Group Creation and Management** - Users can create trip groups, invite participants using a shareable link, and manage group members, trip settings, and related information throughout the journey.
- **Expense Tracking and Settlement** - Travelly allows users to add expenses, split costs equally or custom-wise, compute balances, simplify debts, and settle payments through UPI-based redirection or manual confirmation. This ensures fairness and transparency among all group members.
- **Media and Document Management** - Users can upload, view, download, and manage trip-related photos and important documents such as tickets and reservations, all organized trip-wise for easy access.
- **Route Optimization and Visit Planning** - The application helps users organize their trip better by generating an optimized visiting order for selected locations, reducing travel distance and improving itinerary planning.
- **User Profile and Account Management** - Users can maintain account information, update profile details, and manage authentication securely.

1.3 Intended Audience

The platform is designed for:

- Groups of travelers who want to plan trips collaboratively and manage shared expenses efficiently.
- **Students, friends, and families** traveling together who need a simple way to coordinate trip activities, payments, and shared records.
- Users who want a common digital space to store trip memories, photos, videos, and important documents.
- **Travelers** who want to manage trip planning, budgeting, and organization within a single application instead of relying on multiple tools.

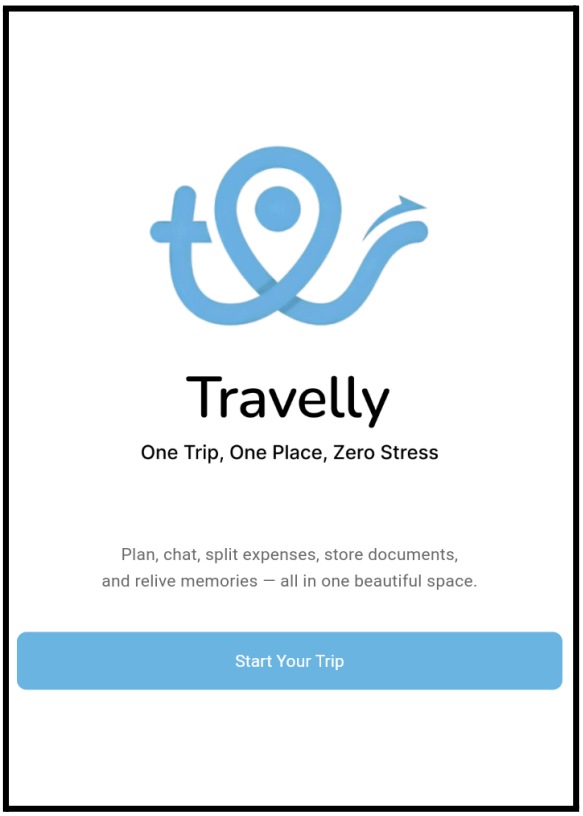

- Users who want a transparent and fair mechanism for splitting expenses and settling balances during group travel.
- **Beta testers, project reviewers, and development stakeholders** who need to understand the system's functionality, behavior, and intended usage.

2 Getting Started

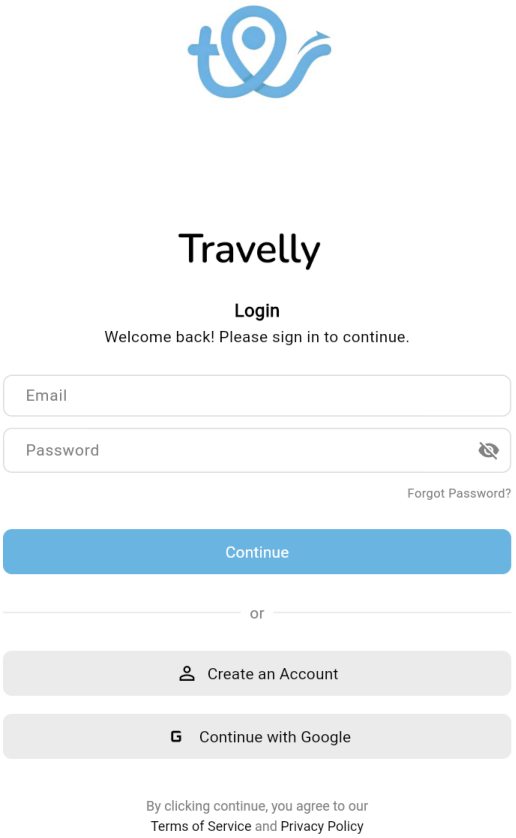

2.1 Launch Screen

When the application opens, the user first sees the Launch Screen. This screen serves as the app's landing page.

- If the user is already authenticated, the app can directly redirect them to the trip section.
- If the user is new or logged out, they can tap "Start Your Trip" to proceed to the login screen.

Launch Screen

2.2 Create an Account (Sign Up)

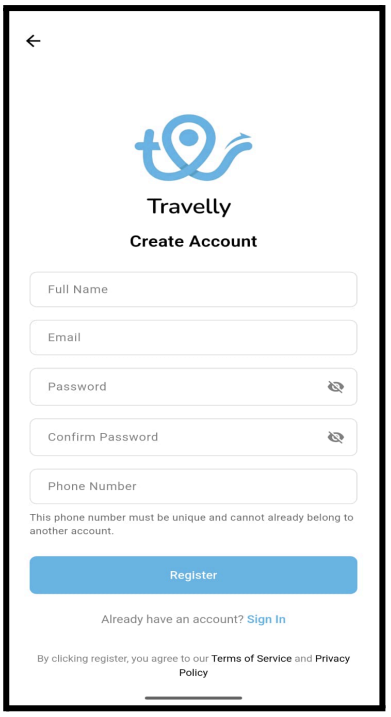

- If a new user does not already have an account, they can click on **"Create an Account"** from the login screen.
- The registration page opens, where the user must enter the required details such as **Full Name, Email, Password, Confirm Password, and Phone Number**.
- The phone number entered must be unique and should not already be associated with another account.
- After filling in all the required details correctly, the user clicks on the **"Register"** button to create the account.
- Users who already have an account can directly click on **"Sign In"** from the registration page.

2.3 Email Verification

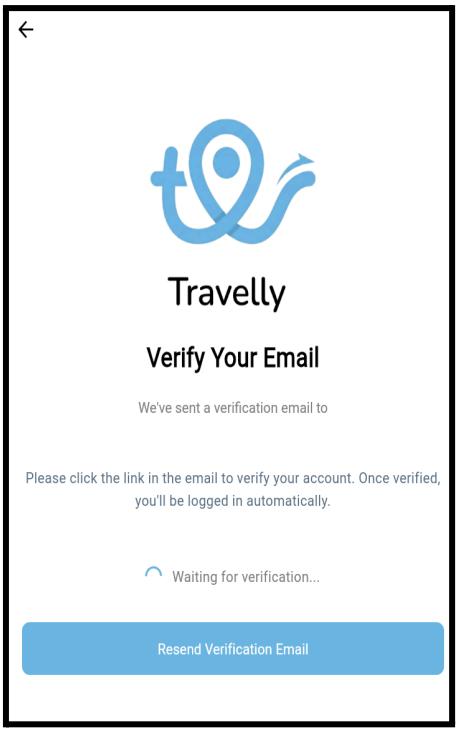

After successful registration, the user is taken to the "**Email Verification"** screen.

- A verification email is sent to the registered email address.
- The system periodically checks whether the user has verified their email.
- The user can also manually resend the verification email.

Once verification is complete, the app redirects the user into the main application flow.

Create an Account Page

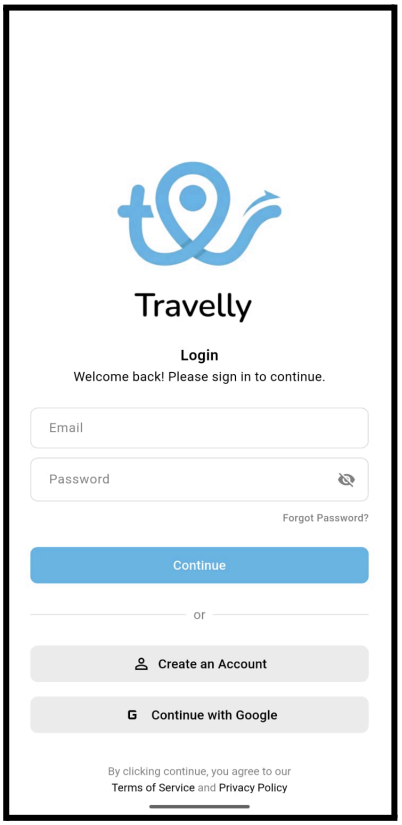

Email Verification Page

2.4 Login

- Registered users can log in to their Travelly account from the **Login** page.
- The user must enter their **Email** and **Password** in the respective input fields.

- If the entered credentials are correct, clicking on the **“Continue”** button logs the user into the application.
- The login page also provides a **“Forgot Password?”** option in case the user cannot remember their password.
- Users who are not yet registered can click on **“Create an Account”** to navigate to the registration page..

Login Page

2.5 Google Sign-in

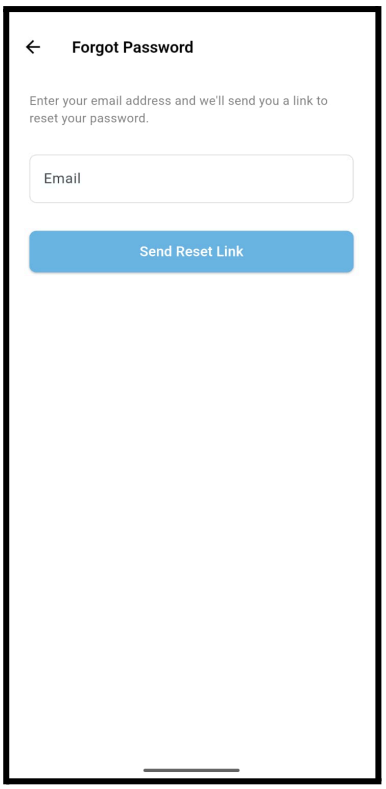

Users can also sign in using Google authentication.

This option provides a faster sign-in experience and reduces the need to manually enter credentials. If authentication succeeds, the user is directed into the app.

2.6 Forgot Password

- If a registered user forgets their password, they can click on **“Forgot Password?”** from the login page.
- The Forgot Password page opens, where the user must enter their registered **Email**.
- After entering the email, the user clicks on the **“Send Reset Link”** button.
- If the email exists in the system, a password reset link is sent to that email address.
- The user can then follow the reset instructions received through email to create a new password.

- Once the password is successfully reset, the user can return to the login page and sign in with the updated password.

Forgot Password Page

3 My Trips

The My Trips screen is the main entry point after login.

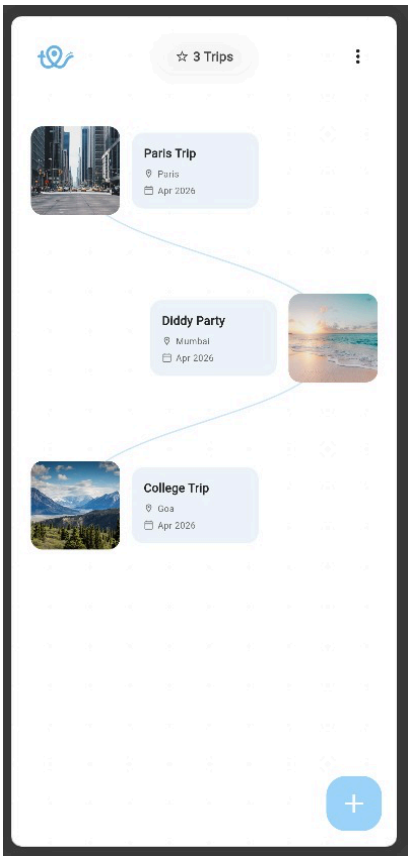

This section allows the user to:

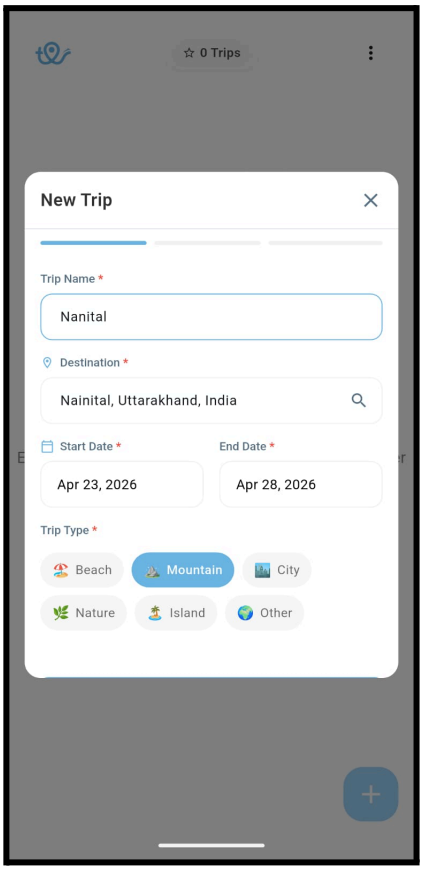

- view all trips they are part of
- open an existing trip
- create a new trip
- access trip-level features through a selected trip

Each trip card generally displays important summary information such as:

- trip title
- destination
- date range
- cover image

The user can select any trip card to open that trip and access its internal dashboard and tools.

4 Dashboard

The Dashboard is the central screen for a selected trip. It gives the user a consolidated overview of key trip information.

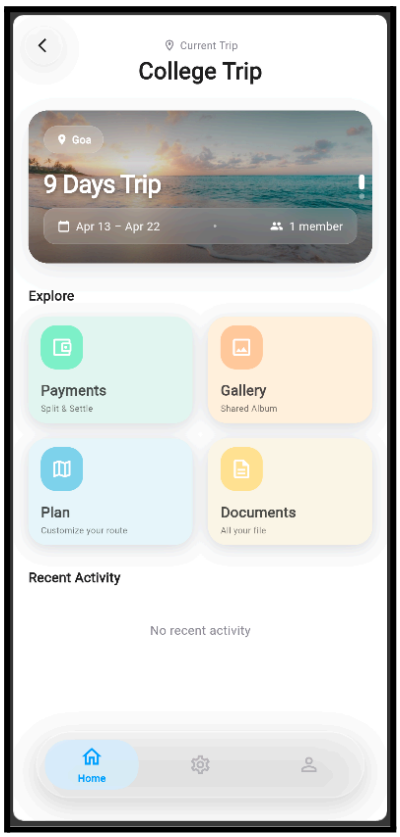

Typical dashboard information includes:

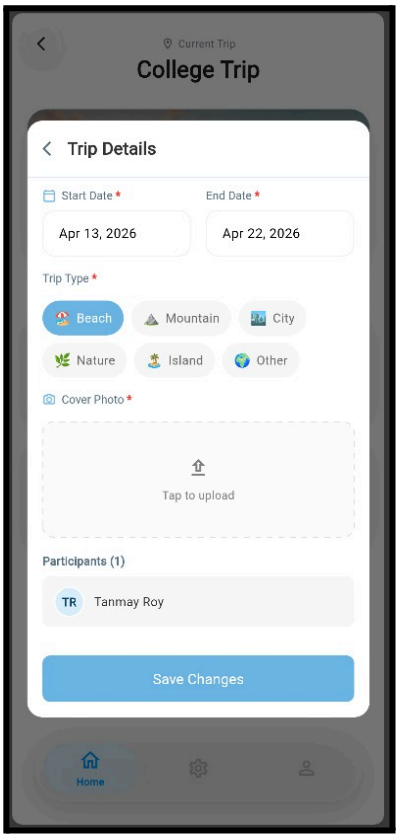

- trip details (dates of trip location)
- participants
- activity-related information
- quick access to important trip sections

The dashboard is designed to act as the main control center for a selected trip.

From this screen, the user can navigate to:

- payments
- gallery
- documents
- route planner
- trip settings
- account settings

5 Payments and Settlements

The Payments section is used to manage shared trip expenses.

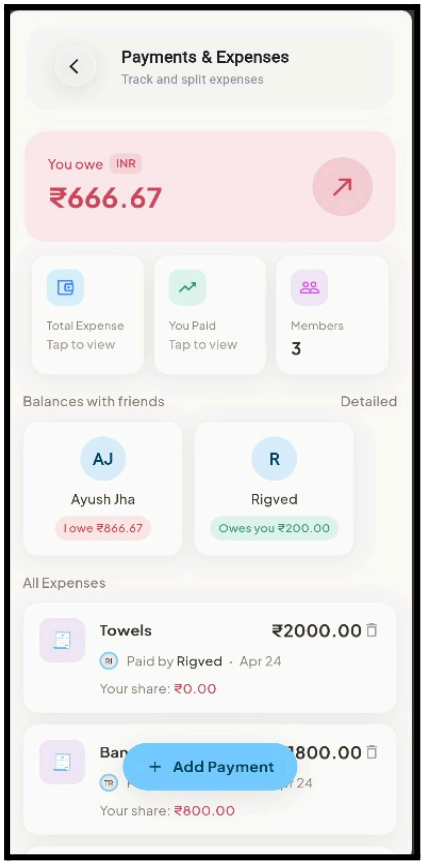

Users can:

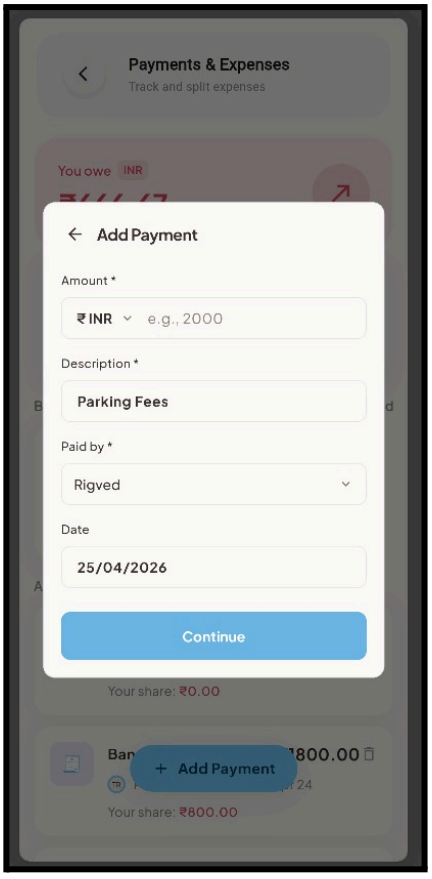

- add a new expense
- view expense history
- split expenses among members
- edit split details where supported
- see balances between members
- settle pending dues
- use UPI-based settlement support where applicable

Typical payment workflow:

1. Open the Payments screen
2. Add an expense with title, amount, payer, and participants
3. The system calculates split amounts
4. Users can review balances and outstanding dues
5. Members can initiate settlement or mark dues as paid

This section is useful for ensuring transparent and fair sharing of trip costs.

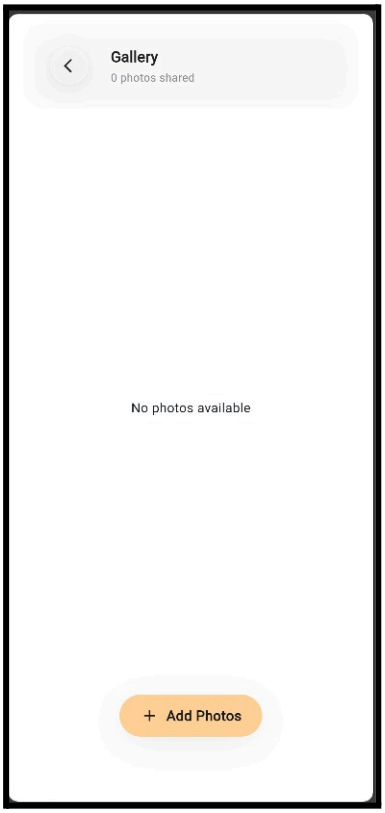

6 Gallery

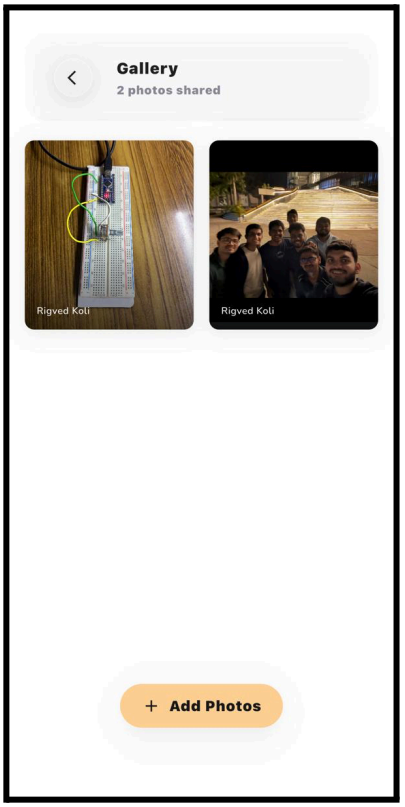

The Gallery section is used to store and view trip photos and media.

Users can:

- view uploaded trip images
- open photos in full-screen mode
- browse media uploaded by group members
- upload new photos or media
- remove media if allowed by the current trip permissions

The gallery provides a central shared memory space for the trip and keeps visual content organized per trip.

7 Documents

The Documents section is used to manage trip-related files.

Users can:

- upload documents such as itineraries, tickets, and confirmations
- view the list of uploaded files
- open supported documents
- download files
- remove documents if allowed

This section helps all members keep important travel documents accessible from one place.

8 Route Planner

The Route Planner module in Travelly helps users organize and manage travel stops within a trip in a structured and convenient way. It is designed to make day-wise or trip-wise movement between multiple destinations easier to plan and understand. Instead of keeping track of stops manually, users can add the places they want to visit and decide how those places should be ordered for travel.

The Route Planner allows users to:

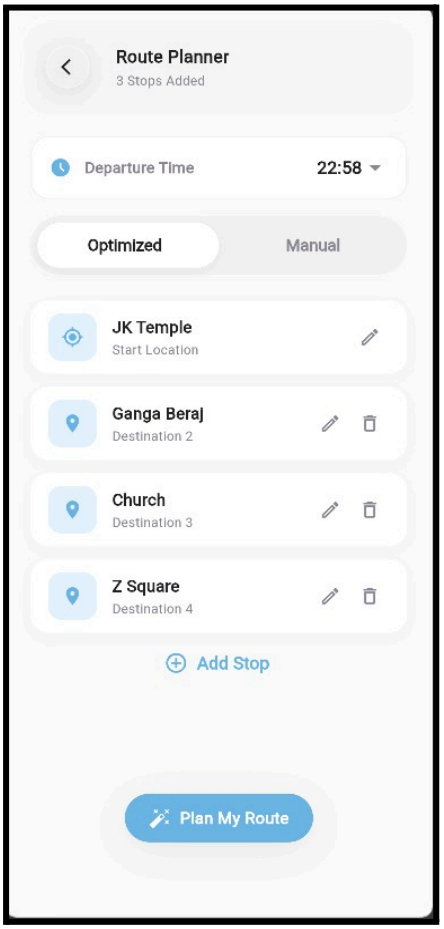

- enter multiple destinations for a trip
- choose whether they want to keep the route in their own selected order or generate an optimized order (based on distance)
- view the final sequence of stops for the journey
- access place-related timing or availability information whenever such information is available
- plan sightseeing, inter-city movement, or multiple travel stops more efficiently

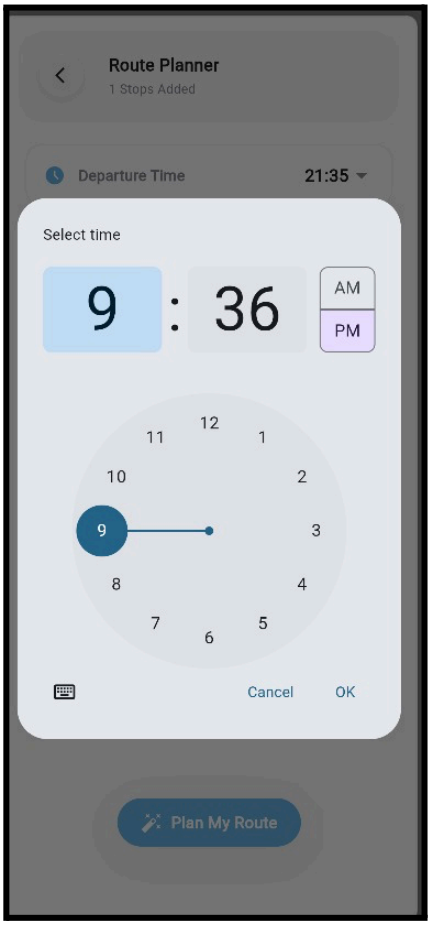

This module is useful for travelers who want better clarity on how to move between places during a trip. It reduces confusion and helps in managing time more effectively, especially when a journey includes several destinations.

Two planning styles are supported in the Route Planner:

1. **Manual Order**
   In this mode, the stops remain in the exact order in which the user enters them. This option is useful when the traveler already knows the sequence in which they want to visit places. For example, if a user has fixed bookings, personal preferences, or time-bound plans, they can preserve that exact route order without any changes by the system. In addition, the application also provides the opening and closing time information of places, wherever available, so that users can arrange their manually selected route in a way that matches the operating hours of each destination.
2. **Optimized Order (Distance Based)**
   In this mode, the system rearranges the entered destinations in a more efficient sequence to improve route planning. The purpose of this option is to reduce unnecessary backtracking and make the journey smoother. It is especially helpful when the user has multiple places to visit but does not have a fixed visiting order in mind. The optimized route helps in better trip organization and may save travel time and effort. In addition, the system also provides the opening and closing time information of places, wherever available, so that users can plan their visits more effectively and avoid scheduling destinations outside their operating hours.

Overall, this feature is particularly beneficial when a trip involves multiple sightseeing locations, several travel stops in a single day, or the need to compare a user chosen order with a system generated optimized order. It improves convenience, supports better decision making, and contributes to a more organized travel experience.

9 Trip Settings

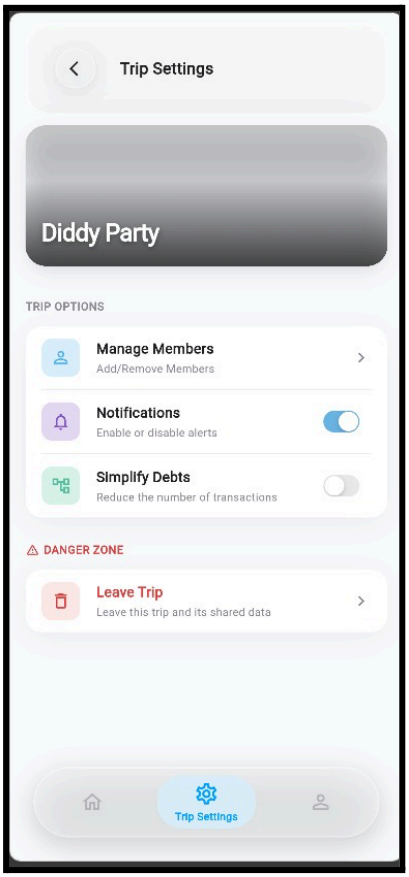

The Trip Settings section allows users to manage important details of the currently selected trip.

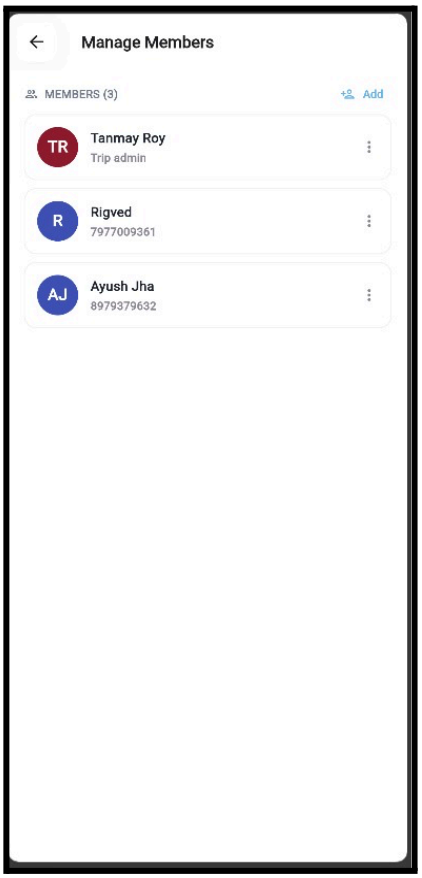

Users can update or manage:

- add/remove members
- enable/disable notifications
- Choose simplify debts option to reduce number of transactions
- Leave trip

Depending on permissions, some actions may be restricted to the trip creator or privileged members.

This screen is meant to centralize configuration and maintenance of trip information.

10 Account Settings

The Account Settings section allows the user to manage their own account and profile.

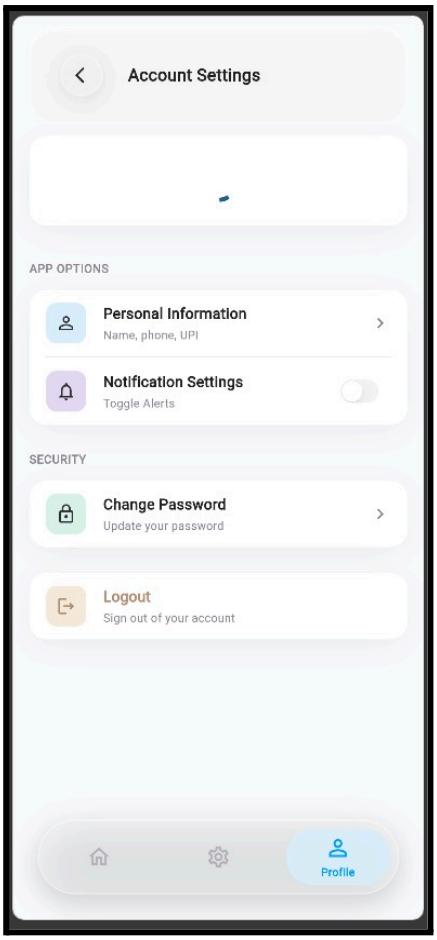

This section includes:

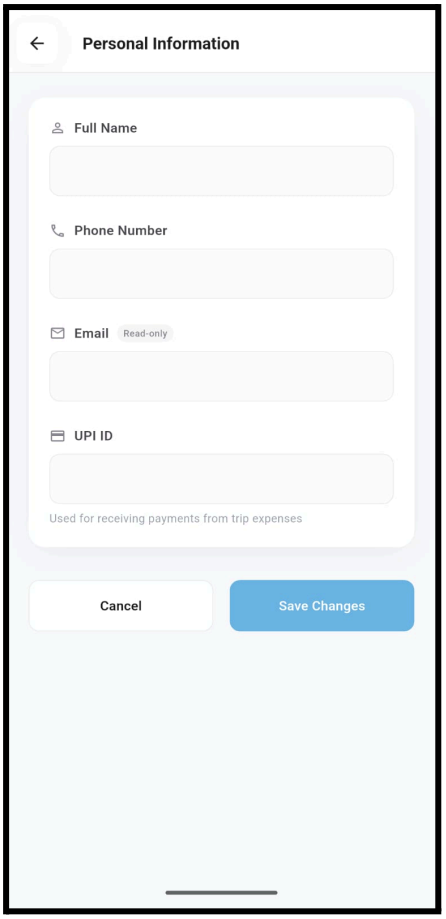

- Personal Information
- Change Password
- Notification Settings

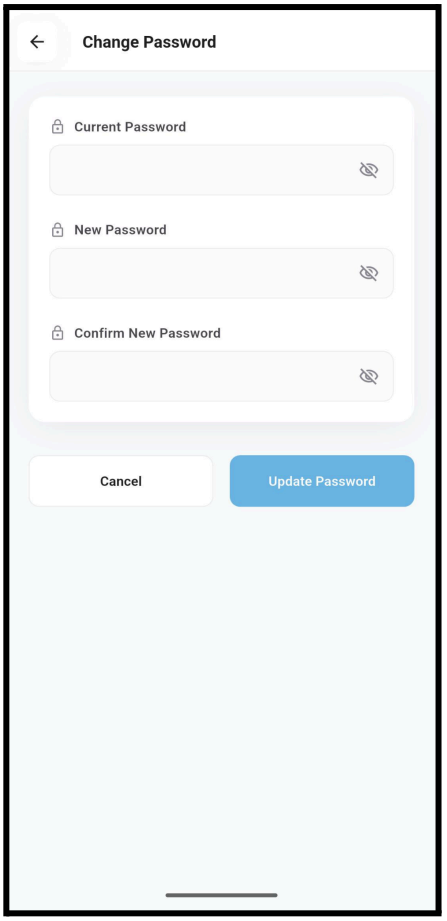

Users can:

- update profile details
- modify phone number and UPI related information
- update password

This section is separate from trip-specific settings and applies to the user's overall account. It also has the option to sign out of an account.

Personal Information

- Allows users to view and update their account details.
- Users can edit **Full Name**, **Phone Number**, and **UPI ID**.
- Helps users keep their profile information accurate and updated.
- The **UPI ID** can be added for receiving payments related to shared trip expenses.

Change Password

- Allows users to change their account password securely.
- Users must enter their **Current Password** before setting a new one.
- The page requires **New Password** and **Confirm New Password** fields to ensure correctness.
- Ensures that only the authenticated user can make password changes.
